Maturity Indices

- Ground color change from green to light-green or white may provide a useful indicator for harvest.
- Fruit should be harvested before starch degradation is complete.
- Limited research indicates that fruit harvest should occur by 180 to 190 days from full bloom to reduce postharvest disorders (skin cracking and internal browning).

Quality Indices

- Firmness, crispness, lack of mealiness.
- Flavor, including soluble solids, titratable acidity and flavor volatiles.
- Freedom from defects such as bruising, decay, stem or blossom-end cracks, cracks in the skin (checking), bitter pit, insect injury, etc.
- Percent blush on the apple.

Optimum Temperature

| 0 ± 1°C (32 ± 2°F) | 90 to 95% |

Rates of Respiration

4 to 6 ml/kg·hr at 0°C (32°F)

To calculate heat production multiply ml CO₂/kg hr by 440 to get BTU/ton/day or by 122 to get kcal/metric ton/day.

Rates of Ethylene Production

2 to 4 µl/kg·hr at 0°C (32°F)

Responses to Ethylene

Ethylene can accelerate senescence and loss of firmness. A reduction in ethylene concentration may reduce susceptibility to scald.

Responses to Controlled Atmospheres (CA)

The following atmospheres have been successful for Fuji apples:

- <0.5% carbon dioxide (see note), 1.5 to 2.0% oxygen
- Maintains firmness and acidity
- Reduces susceptibility to bitter pit and storage scald
- Can store up to 8 months in CA

Note: Late harvested Fuji apples (beyond 180 days from bloom) should not be placed in CA storage. Even at 0.5% CO₂, internal browning can develop.
**PHYSIOLOGICAL DISORDERS**

**Storage Scald.** Information is incomplete; however, Fuji apples appear to be slightly to moderately susceptible to scald. Earlier harvested fruit will be more susceptible to scald. DPA may be needed for storage in air for longer than 2 months. CA storage reduces scald incidence.

**Bitter Pit.** Bitter pit has been observed on a small percentage of fruit. Early harvested, large fruit from young, vigorous trees are most susceptible. Preharvest calcium sprays are most effective to reduce bitter pit. Postharvest calcium dips are also beneficial.

Calcium Rates for Postharvest Dips:
- 2 to 3% solid flakes (77% CaCl₂)
- 1.5 to 2% calcium chloride (CaCl₂)
- 0.5 to 0.8% calcium ion (Ca²⁺)

**Internal Browning.** Browning in the apple flesh as a result of carbon dioxide injury. Keep CO₂ in storage below 0.50% and do not place apples harvested beyond 180 days from bloom in CA storage.

**Skin Cracking or Checking.** Fuji apples appear to be susceptible to skin cracking. The cause is not yet known, however, symptoms increase in severity with delayed harvest.

**PATHOLOGICAL DISORDERS**

**Core Rot.** Fuji is susceptible to core rots, as is its parent, Red Delicious, because of an open calyx tube. Control measures are unknown at this time, but sanitation in the orchard and of dump tank water appears to be important.

**Gray Mold, Blue Mold.**
- Avoid fruit injury
- Sanitize water systems with chlorine or other sanitizers.
- Cool fruit quickly

**Mucor Rot.** Some orchards have Mucor organisms in the soil. Sanitation to keep soil out of drench water is important. Do not place fruit from the orchard floor into storage bins. Chlorine will not control this organism and there are no effective fungicides. Mucor continues to grow slowly even at 0°C (32°F).

**SANITATION OF WATER SYSTEMS**

Sanitation of water systems used to handle apples is important. Chlorine at 50 to 100 ppm is very effective, but the level of available chlorine and solution pH (7.0) must be monitored frequently and adjusted. Sodium will accumulate when liquid sodium hypochlorite is used and can burn apple tissues. We recommend water systems be changed once a day to reduce the risk of burn to apple skins.

It is the policy of the University of California not to engage in discrimination against or harassment of any person, employed by or seeking employment with the University, or in any of its programs or activities, on the basis of race, color, national origin, religion, sex, gender, gender expression, gender identity, pregnancy, physical or mental disability, medical condition (cancer-related or genetic characteristics), genetic information (including family medical history), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services, as well as state military and naval service. This policy is intended to be consistent with the provisions of applicable state and federal laws and University policies. University policy also prohibits retaliation against any employee or person seeking employment for bringing a complaint of discrimination or harassment pursuant to this policy. This policy also prohibits retaliation against a person who assists someone with a complaint of discrimination or harassment, or participants in any manner in an investigation or resolution of a complaint of discrimination or harassment. Retaliation includes threats, intimidation, reprisals, and/or adverse actions related to employment or to any of its programs or activities.

In addition, it is the policy of the University of California to undertake affirmative action, consistent with its obligations as a Federal Contractor, for minorities and women, for persons with disabilities, and for covered veterans. The University commits itself to apply every good faith effort to achieve prompt and full utilization of minorities and women in all segments of its workforce where deficiencies exist. These efforts conform to all current legal and regulatory requirements, and are consistent with University standards of quality and excellence. In conformance with Federal regulations, written affirmative action plans shall be prepared and maintained by each campus of the University of California, by the Lawrence Berkeley National Laboratory, by the Office of the President, and by the Division of Agriculture and Natural Resources. Such plans shall be reviewed and approved by the Office of the President and the Office of the General Counsel before they are officially promulgated. Inquiries regarding the University’s equal employment opportunity policies may be directed to the Affirmative Action Contact, University of California, Agriculture and Natural Resources, 2801 Second Street, Davis, CA 95618 (530) 750-1318.
