Cherry
Recommendations for Maintaining Postharvest Quality

Carlos H. Crisosto, Elizabeth J. Mitcham, and Adel A. Kader
Department of Plant Sciences, University of California, Davis

MATURITY INDICES

Skin color and soluble solids content (SSC) are the main criteria used to judge fruit maturity. Minimum maturity in California requires that the entire cherry surface have a minimum of light red color and/or 14 to 16% SSC, depending on the variety. The red mahogany stage is recommended for harvest of Brooks, Garnet, Ruby, Tulare and King varieties.

QUALITY INDICES

Taste is related to SSC, titratable acidity (TA) and the ratio of SSC/TA. Freedom from cracks, bird pecks, shriveling, decay or misshappen fruit (doubles, spurs). Green fleshy stems are often associated with freshness and quality.

OPTIMUM TEMPERATURE

-0.5 ± 0.5°C (31 ± 1°F)  90-95%; high humidity is particularly important to maintain green stem color

OPTIMUM RELATIVE HUMIDITY

RATES OF RESPIRATION

<table>
<thead>
<tr>
<th>Temperature</th>
<th>0°C (32°F)</th>
<th>5°C (41°F)</th>
<th>10°C (50°F)</th>
<th>20°C (68°F)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ml CO₂/kg·hr</td>
<td>3-5</td>
<td>5-9</td>
<td>15-17</td>
<td>22-28</td>
</tr>
</tbody>
</table>

To calculate heat production multiply ml CO₂/kg·hr by 440 to get BTU/ton/day or by 122 to get kcal/metric ton/day.

RATES OF ETHYLENE PRODUCTION

<1 µl/kg·hr at 20°C (68°F)

RESPONSES TO ETHYLENE

Cherry response to ethylene is minimal. Ethylene does not accelerate cherry ripening.
PHYSICAL AND PHYSIOLOGICAL DISORDERS

Pitting. An indentation in the surface of the fruit caused by the collapse of cells under the skin. Thought to result from impact injury.

Bruising. Results from compression and impact of the fruit.

Postharvest life is closely related to respiration rate. Respiration rate increases as a result of increased temperature and physical injury.

PHYSIOLOGICAL DISORDERS

Brown Rot. Caused by Monilinia fruticola, disease can begin in the orchard or postharvest. Pre and postharvest control measures are necessary.

Grey Mold. Caused by Botrytis cinerea, a fungus that continues to grow slowly at 0°C (32°F).

Rhizopus Rot. Caused by Rhizopus stolonifer, a fungus that is found in fruit exposed to temperatures of 5°C (41°F) or greater.

Proper temperature management (rapid cooling to optimum storage temperature) can completely control Rhizopus Rot and significantly reduce Brown Rot and Grey Mold. Eliminating injured and diseased fruit from the packed box is important. Fungicide treatments, pre and postharvest are often beneficial.

PATHOLOGICAL DISORDERS

Brown Rot. Caused by Monilinia fruticola, disease can begin in the orchard or postharvest. Pre and postharvest control measures are necessary.

Grey Mold. Caused by Botrytis cinerea, a fungus that continues to grow slowly at 0°C (32°F).

Rhizopus Rot. Caused by Rhizopus stolonifer, a fungus that is found in fruit exposed to temperatures of 5°C (41°F) or greater.

Proper temperature management (rapid cooling to optimum storage temperature) can completely control Rhizopus Rot and significantly reduce Brown Rot and Grey Mold. Eliminating injured and diseased fruit from the packed box is important. Fungicide treatments, pre and postharvest are often beneficial.

It is the policy of the University of California not to engage in discrimination against or harassment of any person, employed by or seeking employment with the University, or in any of its programs or activities, on the basis of race, color, national origin, religion, sex, gender, gender expression, gender identity, pregnancy, physical or mental disability, medical condition (cancer-related or genetic characteristics), genetic information (including family medical history), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services, as well as state military and naval service. This policy is intended to be consistent with the provisions of applicable state and federal laws and University policies. University policy also prohibits retaliation against any employee or person seeking employment for bringing a complaint of discrimination or harassment pursuant to this policy. This policy also prohibits retaliation against a person who assists someone with a complaint of discrimination or harassment, or participants in any manner in an investigation or resolution of a complaint of discrimination or harassment. Retaliation includes threats, intimidation, reprisals, and/or adverse...

In addition, it is the policy of the University of California to undertake affirmative action, consistent with its obligations as a Federal Contractor, for minorities and women, for persons with disabilities, and for covered veterans. The University commits itself to apply every good faith effort to achieve prompt and full utilization of minorities and women in all segments of its workforce where deficiencies exist. These efforts conform to all current legal and regulatory requirements, and are consistent with University standards of quality and excellence. In conformance with Federal regulations, written affirmative action plans shall be prepared and maintained by each campus of the University of California, by the Lawrence Berkeley National Laboratory, by the Office of the President, and by the Division of Agriculture and Natural Resources. Such plans shall be reviewed and approved by the Office of the President and the Office of the General Counsel before they are officially promulgated. Inquiries regarding the University’s equal employment opportunity policies may be directed to the Affirmative Action Contact, University of California, Agriculture and Natural Resources, 2801 Second Street, Davis, CA 95618 (530) 750-1318.
